BALTIC LIFEJACKETS SWEDEN

Ever since we started the design and manufacture of lifejackets nearly 40 years ago safety has been paramount. All our products are thoroughly tested in house before they are sent to an accredited laboratory for CE certification. It is not only the in water properties but all the materials which are also thoroughly tested.

We are often asked which buoyancy aid or lifejacket is the safest. Our response is simple, the one that you wear, not the one that is stowed away in a locker somewhere.

We put a lot of effort into the design, fit and comfort so that it should be a pleasure to wear a life jacket.

Baltic Safety Products AB is a Swedish company located in Västergötland. For these 40 or so years we have adhered to the philosophy that it is impossible to compromise quality and functionality. This philosophy has made us the largest manufacturer in Europe with distributors in over 50 countries.

As market leader, we are driving the development of safer and more comfortable lifejackets and buoyancy aids for the future.

In our extensive range you can find products for all kinds of activities

on water, from watersports and dinghy sailing to paddling and fishing. Of course we also have all-round buoyancy aids and lifejackets too. Our inflatable lifejackets are among the most popular on the market thanks to the fact that they are compact and comfortable. Whatever your plans there is always a lifejacket for your needs.

It is important to remember that inflatable lifejackets are technical products that demand regular inspection and checks. For more information on how to take care of your inflatable lifejacket please read the manual accompanying the product or visit our website.

Floatation clothing like gilet-style vests and jackets are both safe and functional. However if the water is cold it could be a good idea to wear a floatation suit, approved as a buoyancy aid and for thermal protection.

The boating season is soon here so get out on the water and have fun. With a lifejacket from Baltic you have one less thing to think about, safety. We have thought about that for you.

When it comes to your personal safety there is no room for compromise.

Safe Sailing!

www.baltic.se

INFLATABLE LIFEJACKETS

Inflatable lifejackets are among the safest product to use when you are out on the water as long as you maintain and care for them correctly. Inflatable lifejackets function using a Co₂ cylinder that must be replaced each time the lifejacket has been inflated. The cylinder has no specific expiry date but it should be checked regularly ensuring that it has not been pierced or corroded and is screwed in tightly. The automatic lifejacket has a sensor (cartridge) once fully immersed it activates and inflates the lifejacket. The cartridge should also be checked that it is within the expiry date and screwed on tightly. The cartridge is simple to remove and replace but if in doubt one of our retailers will be able to assist you. All inflatable lifejackets both Manual and Automatic models have a manual pull cord. For more information on care and maintenance of your lifejacket please read the manual accompanying the product.

An inflatable lifejacket must always be the outermost garment, this is to ensure the lifejacket is not constrained from inflating and that water can activate the cartridge.

It is important to adjust the waistband so that the lifejacket fits

correctly to the body. A poorly adjusted lifejacket tends to transfer the weight onto the collar, whereas a well-adjusted lifejacket can be worn all day without any discomfort to the shoulders and neck.

Many of our models are available with or without integrated safety harness. On board a sailing boat a lifejacket with integrated safety harness offers the ability to connect a safety line to the life-jackets, especially beneficial in rough conditions or when one moving around the deck. For motorboats, speedboats or for sport fishing, we recommend a model without safety harness as it is lighter and slightly easier to adjust.

Our most popular model of inflation mechanism is automatic, it ensures that the vest inflates by itself when you fall into the water. The cartridge must be checked and replaced if the cartridge has reached its expiry date. Manual inflation lifejackets tend to be used by among others, anglers who stand in flowing water, regatta sailors and rescue personnel who are swimmers, who sometimes require entry into the water without buoyancy.

INFLATABLE LIFEJACKETS **RACING**

Lifejackets in this category are designed for active sailing and especially to be comfortable to wear for long periods. All lifejackets in Racing category are available with integrated spray hood and lifejacket light to comply with the current international yacht racing regulations.

iFloat

The iFloat is our latest development designed to give maximum freedom and comfort. The inflatable lung is stowed in a pocket that can be sited anywhere around the waist. To deploy should you require buoyancy, simply pull the iFloat out of the pocket place over your head and inflate by pulling the inflation cord. Only suitable for swimmers.

iFloat Man 5699

iFloat

- Manual gas inflatable buoyancy aid.
- Contained in compact pouch fitted to a waist belt.
- Suitable for activities on and around water.
- 75 N buoyancy.

Size: 40-130 kg.

HOW THEY WORK

The inflatable lifejacket has an CO₂ cylinder connected via an inflation valve fitted to an airtight lung. This valve is either automatic or manually activated. To inflate the lifejacket manually you must pull the inflation cord located at the right hand side. The inflation starts immediately.

An automatic inflatable lifejacket is inflated with CO₂ gas activated either manually by pulling the cord or within 3 seconds automatically upon immersion.

All lifejackets are equipped with a mouth inflation deflation inspection tube.

After inflation to expel the air from the inflatable lung invert the mouth inflation tube cap, depress the valve and gently squeeze. The gas in the cylinders is carbon dioxide do not inhale.

N.B! When the lifejacket has been inflated it must be rearmed. Inside your lifejacket you can find information on which spare parts to use. It is the same spare parts to all Baltic 150N lifejackets, CO₂ cylinder art no 2433 and automatic cartridge art no 2520. Inside the rearming kit you will find instructions how to rearm your lifejacket.

WHAT LIFEJACKET SHOULD I CHOOSE?

RACING

Lifejackets in this category are available with additional equipment such as integrated spray hoods and lifejacket lights to meet the current racing requirements. The fit of these lifejacket is excellent and ensures they are comfortable over long periods on watch. Lifejackets in category Racing are not specifically for racing but also perform superbly for cruising or offshore sailing.

COMFORT

If you require a lifejacket with greater comfort and innovative detailing, one should look at lifejackets in this category. Superb comfort and fit, soft materials and inspection windows are standard in our comfort lifejackets. These lifejackets fit equally well in motorboat or sailboat, inland or offshore.

VERSATILE

Versatile lifejackets are manufactured from durable materials and all have a fleece collar, removable crotch strap and the option of quick-release buckle or integrated safety harness. You may also select automatic inflation or manual only inflation system.

SPARE PARTS AND ACCESSORIES

We recommend that you always have at hand spare cylinders and cartridges (if automatic) for your inflatable lifejackets. It is very important that inflatable lifejackets are inspected at least annually. You can perform a quick check yourself.

The Automatic cartridge must be replaced before the expiry date printed on it.

Red Indicator = Co₂ Cylinder and or automatic cartridge must be replaced or inspected.

Green Indicator = The lifejacket is ready for use.

FLOATATION CLOTHING

The Floatation clothing range are buoyancy aids that are designed to be used and worn as conventional clothing. Jackets and gilets in various models are tested and are approved to the 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety but will not turn you on to the safe back position or support your head. Therefore 50N products are only suitable for swimmers.

The vests in the gilet style are suitable to wear on the water as well as near the water, with practical outside and inside pockets. The jackets are available in models for recreational use and for more demanding environments, both models have ventilation zips under the arms for cooling in warm conditions.

FLOATATION SUITS

A floatation suit is a safe and practical choice for going out on the sea when it's cold or if you are venturing out on the ice. Floatation suits are manufactured with wind and waterproof outer material with taped seams. The sleeves have an inner PU cuff that tightens to avoid water ingress and an outer cuff that can be tightened over gloves. At the bottom of the legs there is an outer tightening strap with no inner cuff to allow trapped air to escape if you fall in the water head first. For when you leave the water there are mesh drains in the leg lining. All models have adjustable internal braces, multiple fleece-lined outside pockets, inside pocket, lined hood and a comfortable lining.

Floatation suits besides being tested to 50N standard are also tested and approved to EN ISO 15027 for thermal protection. This requires test subjects in floatation suits to be immersed in water at 10 degrees Celsius for two hours, during this period they must not lose more than two degrees in body temperature. The test subjects in Baltic floatation suits temperature loss averaged 1.1 degrees. Apart from protection against hypothermia our floatation suits also protect against the first cold shock you get when you fall in cold water.

BUOYANCY AIDS FOR ACTIVE WATERSPORTS

If going water skiing or wakeboarding, it is essential to have a buoyancy aid that is high in buoyancy and that stays put even if you fall. The Wake and Waterski have instead of a zip closure several robust buckles that adjust to a perfect fit ensuring that the vest cannot ride up when you are in the water. The Waterski also has padded side panels to protect against high impact falls.

Waterski is also a good choice for jet skiing. Watersports buoyancy aids are approved to 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety but will not turn you on to the safe back position or support your head. Therefore 50N products are only suitable for swimmers and for persons over 25 kg. If you weigh less than 25 kg or are not able to swim you should use a lifejacket.

LIFEJACKETS

A lifejacket is designed to aid the wearer to turn onto the safe back position and support the head so that the airways are above the water. This therefore makes it the obvious choice for all non-swimmers. On all models for newborns up to and including 15 kg, the Baltic lifejacket is fitted with a wider crotch strap that can be clicked into two length positions to ensure a perfect fit. These lifejackets have segmented front panels so that they contour to the body and give freedom of movement. A lifejacket has more buoyancy on the front and less on the back, this ensures the lifejacket turns the wearer into the safe back position. The collar of the vest has nothing to do with the actual turning but helps to support the head so that the airways are above the water.

Our lifejackets are equipped with crutch strap, retro-reflective patches and a whistle.

There is also a model with integrated safety harness for the little ones, these harnesses are tested and approved according to EN ISO 12401 and have stainless steel D-rings for attaching a safety line.

LIFEJACKETS **SPLIT FRONT**

Lifejackets with segmented fronts closely follow the body contours to allow extra freedom of movement. All lifejackets have crotch straps, retro-reflective patches and whistle as standard.

SPECIALIST BUOYANCY AIDS

In this category you will find buoyancy aids that are specifically designed for particular activities and sports on or in the water. There are models for kayaking, fishing, sailing, canoeing and of course dinghy sailing. The buoyancy aid Dinghy Pro for instance is used extensively by national sailing teams across the globe from USA to Australia.

The thing to consider when choosing a buoyancy aid is what specific uses you wish it to perform. For instance, in kayaking an all-round vest is ok however the optimum choice would be a kayak vest which is shorter cut so that it does not slide up when you sit down and cut away at the side for more freedom of movement.

The fishing vest Fisherman and adventure vest Adventure have many pockets and attachment points. The Offshore vest is equipped with integrated safety harness and fleece lined hand warmers pockets for when the cold wind blows.

The one thing that all the models have in common is safety. All our buoyancy aids are tested and approved to the latest standards.

Functional buoyancy aids are approved to 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety but will not turn you on to the safe back position or support your head. Therefore 50N products are only suitable for swimmers and for persons over 25 kg. If you weigh less than 25 kg or are not able to swim you should use a lifejacket.

ALL PURPOSE BUOYANCY AIDS

An all-round buoyancy aid designed to suit normal boating and activities on or near water. When selecting an all-purpose vest the two most important parameters are fit and design, it should fit comfortably and suit your specific needs.

All-round buoyancy aids are approved to the 50N standard, this means that a buoyancy aid will keep you afloat with a good margin of safety but will not turn you on to the safe back position or support your head. Therefore the 50N products are only suitable for swimmers and for persons over 25 kg. If you weigh less than 25 kg or are not able to swim you should use a lifejacket.

For all our buoyancy aid models that have a waistband there is a retro-fit crutch strap available as an accessory, this when fitted prevents the buoyancy aid riding up in the water, making it easier to swim. A lot of kids have fun swimming with a buoyancy aid and the crutch strap ensures it does not slide up over the arms.

What distinguishes the different models besides colour is the design and cut, some models have segmented panels, allowing the buoyancy aid to follow the contours of your body providing a better and more comfortable fit. Other models have zipper pockets for storage of keys or personal effects.

When selecting any of our products one should bear in mind that the most important feature is the fit. The weight range on the jacket label is only an indication, so if your weight is say 75 kg but a vest that is 50-70 kg is the better fit, then that it is the one to select. An oversized buoyancy aid will possibly ride up in the water and impair your swimming capabilities.
